verizon✓

This is
Designed by Verizon

**Simplifying towards
more meaningful IA**

We deliver one consistent
Designed by Verizon experience that is
Meaningful, Human, Responsible.

Meaningful design is
useful, simple and reliable.

Human design is
personal, caring and supportive.

Responsible design is
honest, ethical and sustainable.

As our experiences evolve to be more
anticipatory, personalized and helpful,
Information Architecture should be
human and meaningful.

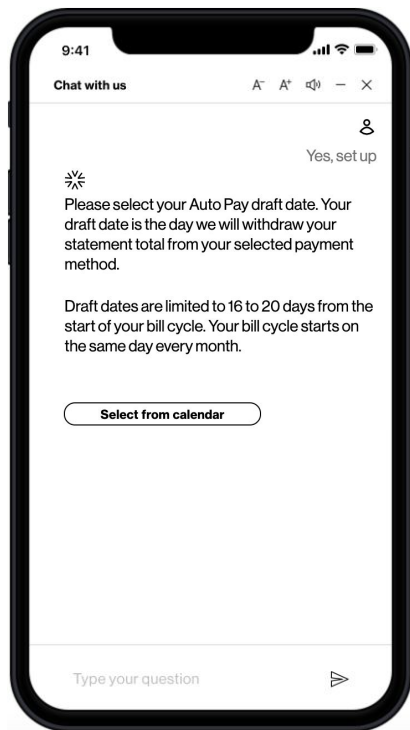

Simple and reliable,
instead of noisy and pushy.

Fundamentally personalized,
instead of telling you it's "for you."

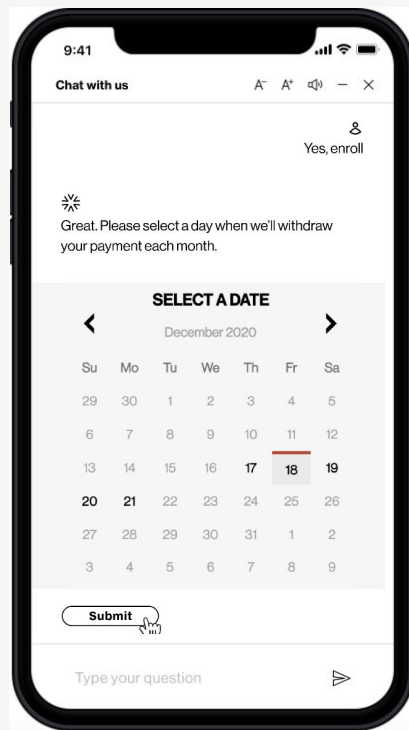

Collaborative and friendly,
instead of explanatory and technical.

Let's look at a few examples.

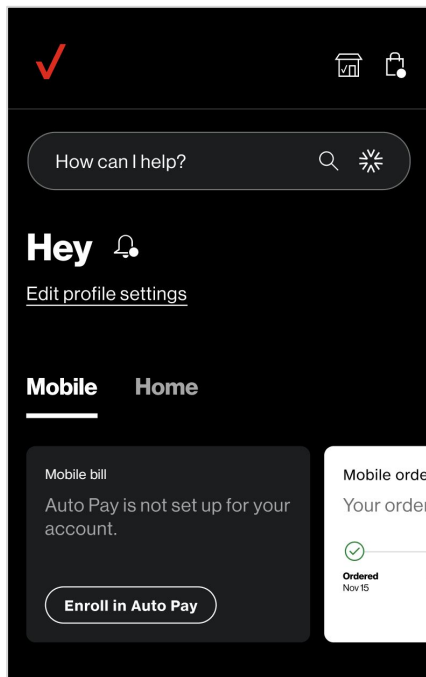

A conversational interface goes from explaining the rules...

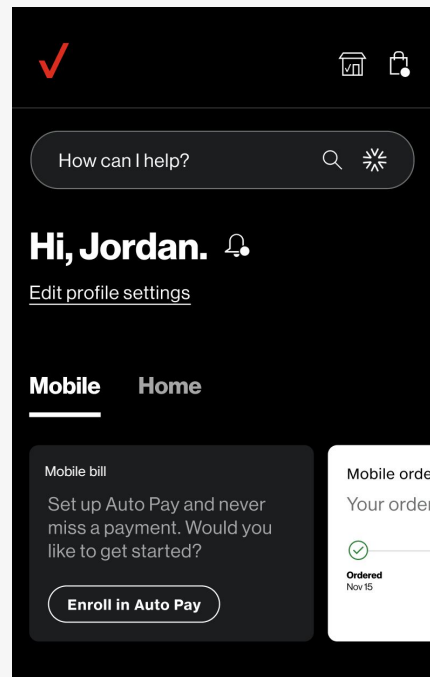

to making things easy.

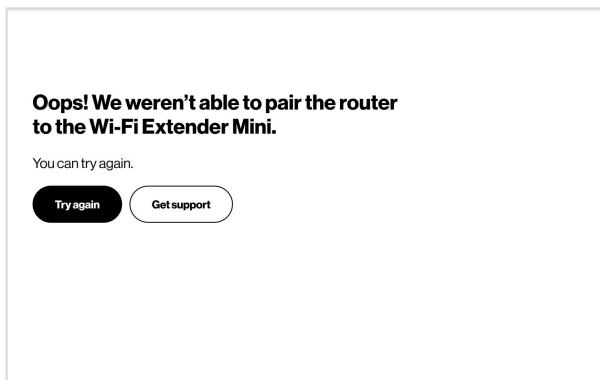

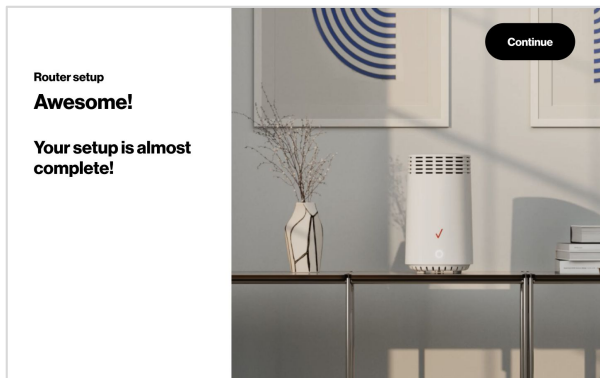

For this account screen, we went from reporting information...

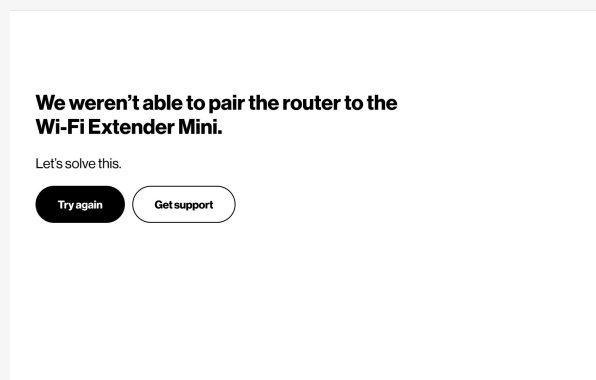

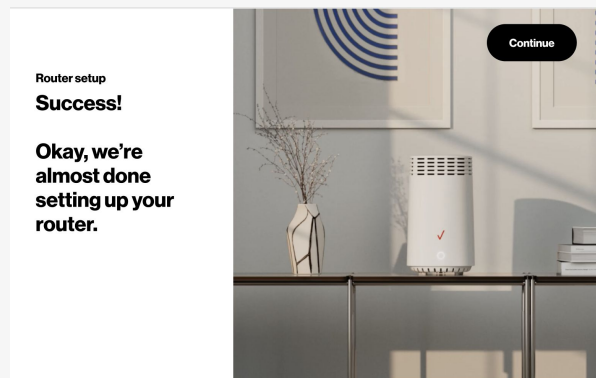

to starting a conversation.

In troubleshooting contexts, from being enthusiastic...

to expressing sincerity and teamwork.

Creating a
scalable content strategy

Simplify the ecosystem.

Create rules for what content should appear where (touchpoint content strategy).

Codify a logic that work across all touchpoints (messaging taxonomy).

Simplified messaging taxonomy example

	Priority update component	Notification component	Account history component
Urgent update (action needed)			
Status update			
Recurring bill updates			
Suggested, non-urgent action			
Disruption or outage			

Apply the taxonomy to simplify communications.

Urgent update (action needed)

There is an issue with your device activation.

Priority update	Notification

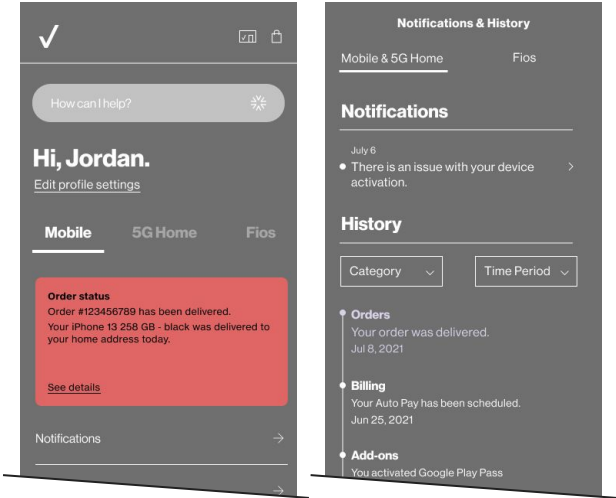

Account

Notifications & History

Status

Order delivered

Priority update	Account history

Account

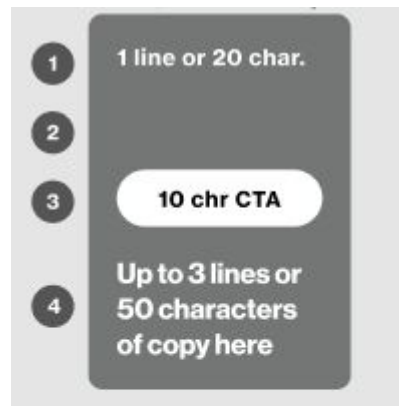

Notifications & History

Apply brand voice.

Translate brand principles to voice attributes.

Document rules and vocabularies for reusable content.

Create scenario-specific best practices for handcrafted content.

1. Eyebrow. Tells the customer the topic of the message: service and category. [link to eyebrow matrix](#)

2. Background image.

3. CTA button. Clarifies choices and next steps. [link to CTA matrix](#)

4. Headline. Makes a personalized offer recommendation, with a clear value statement for the customer.

Translate brand principles to voice attributes.

Human

Approachable and considerate, acts like a real person and treats you like one too.

Personal

Knows you and anticipates your needs appropriately.

Supportive

Is there for you, empowers you and puts your best interests first.

Expert

Guides you to the best solution.

Straightforward

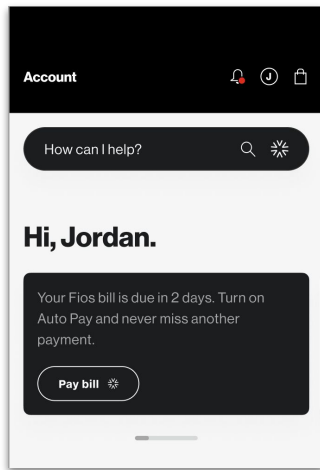

Clear and simple, so you know what you need to do and what happens next.

Human

Meaningful

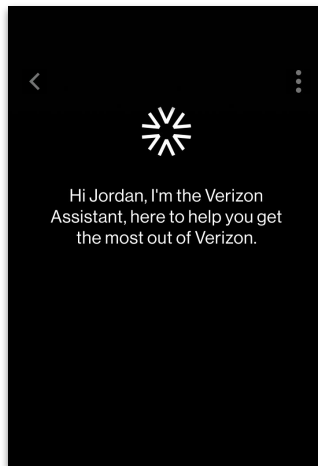

Responsible

Document rules and vocabularies for reusable content.

Bill, Account, Offers

Not: My Bill, My Account, My offers

The **Verizon Assistant**

Not: your Verizon Assistant

For example: we don't need to rely on pronouns for naming when the experience itself is reliably personalized.

Create scenario-specific best practices for content that is handcrafted.

Warning/heads up

We like to keep our customers in the know, including alerting them when they need to take action. When a situation is time-sensitive, explain what needs to happen in a human, helpful tone.

When there's something the customer needs to know, tell them directly what to expect and what they need to do to get to a good resolution.

Examples: Account or service change, bill payment overdue

What do users expect from us?

- Clarity
- Easy to take action

Key voice attributes

Straightforward

- Use clear, pithy language to tell the customer what needs to happen.
- Set context so they can understand cause and effect, when needed.

Do this

Your credit card expired. Let's update your payment details now to avoid late fees.

[Update payment information](#)

Not this

Uh oh, your credit card expired! You might incur late charges on your next bill.

Style Guides

Content Guidelines

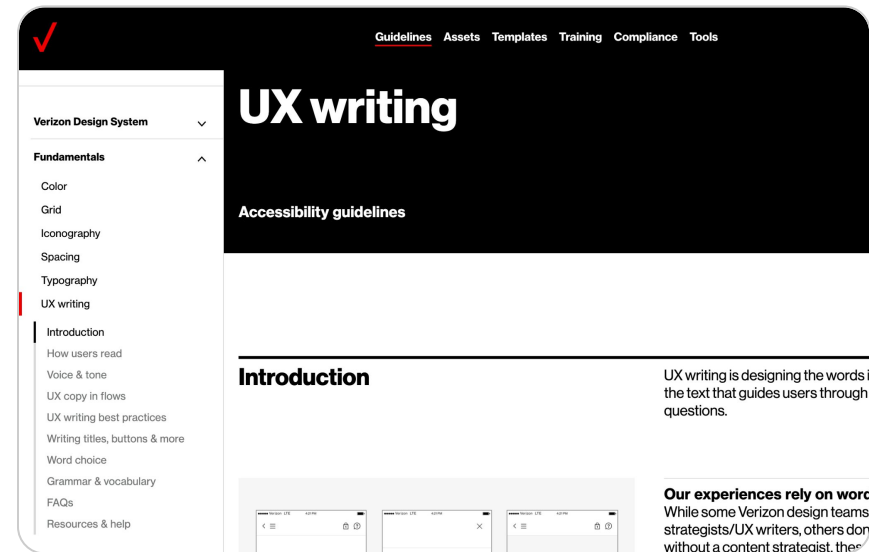

Hi, Jordan.

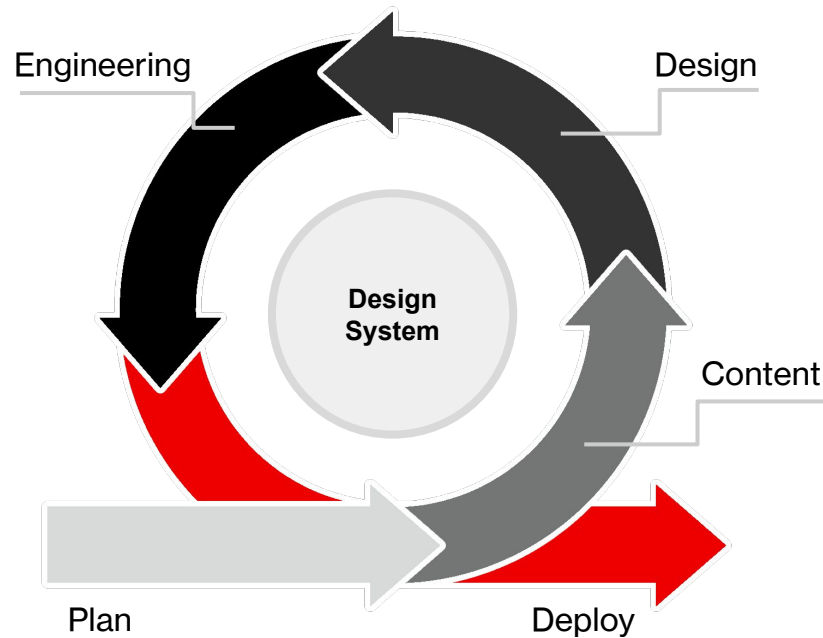

Your Fios bill is due in 2 days. Turn on Auto Pay and never miss another payment.

Make the guidelines
easily accessible.

**Plug in where the
teams already are.**

Simple and conversational content
is critical for **meaningful**
Information Architecture.

Connect with us.
