Verizon Design is...
Meaningful. Human. Responsible.

Meaningful design is
useful, simple and reliable.

Human design is
personal, caring and supportive.

Responsible design is
honest, ethical and sustainable.

Verizon Design System

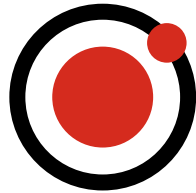

Core Library

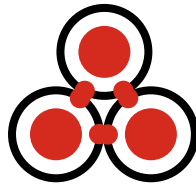

**Reusable
components**

The diagram illustrates the structure of the Verizon Design System Core Library. It features a central, stylized mountain range composed of several overlapping, light gray triangular shapes. This mountain range is flanked by two large, white circles with thin black outlines. The left circle contains the text 'Reusable components' and the right circle contains the text 'Usage Guidelines'. A thick, solid black horizontal line runs across the bottom of the diagram, positioned behind the base of the mountain range and the bottom of the two circles.

**Entry and exit
requirements**

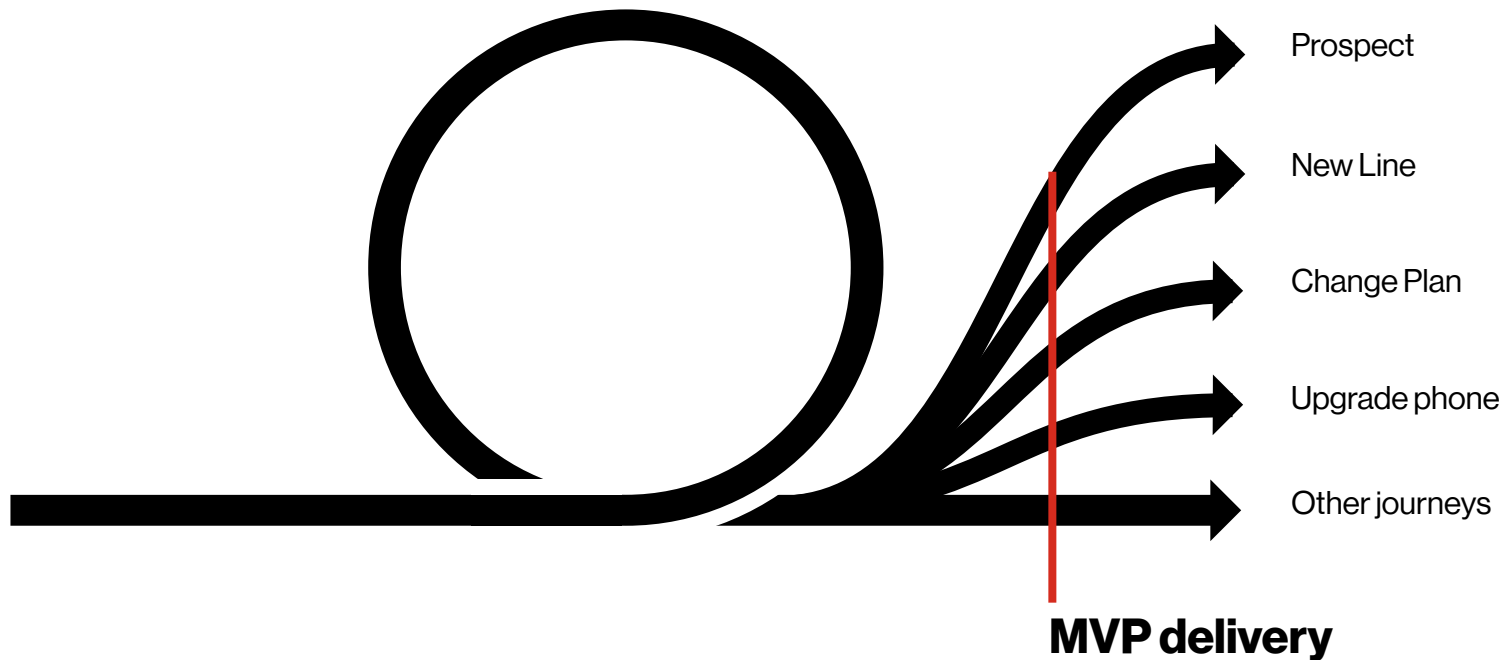

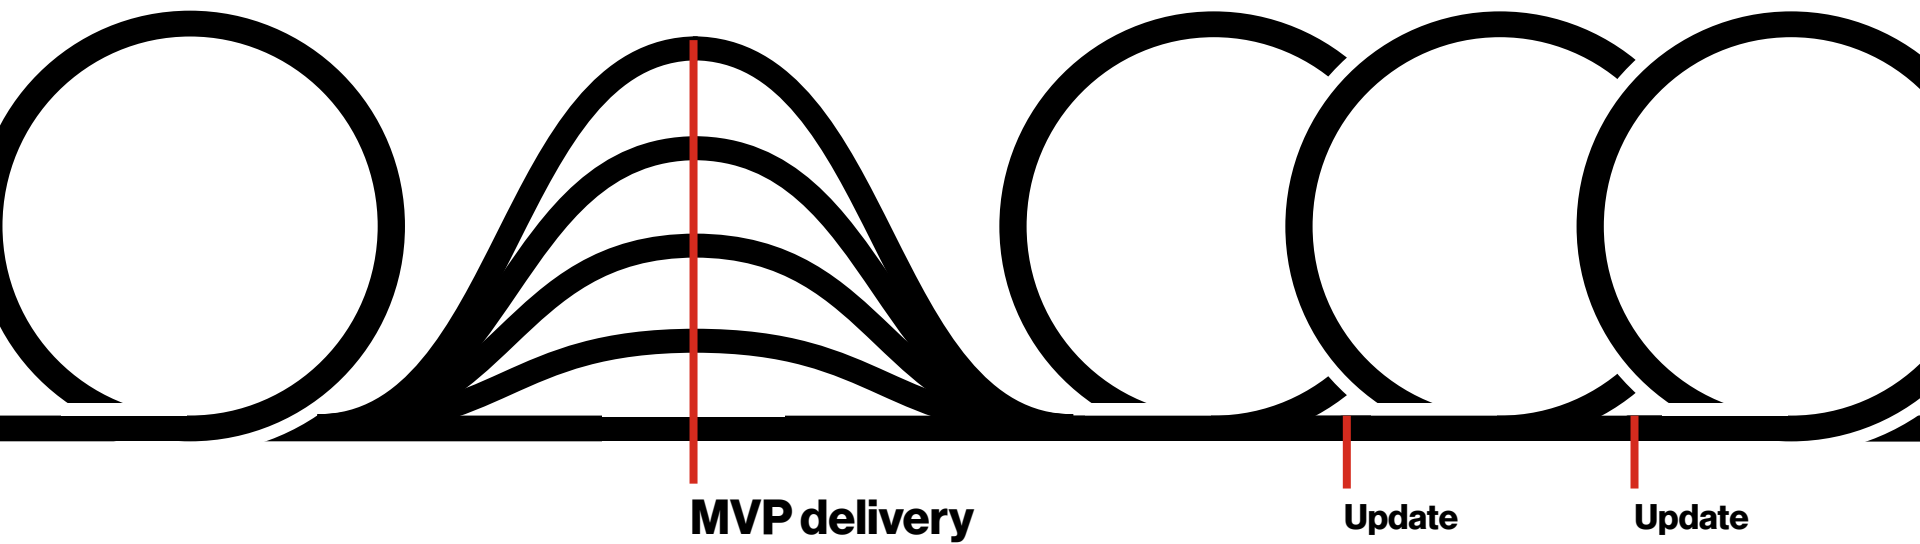

**Data
requirements**

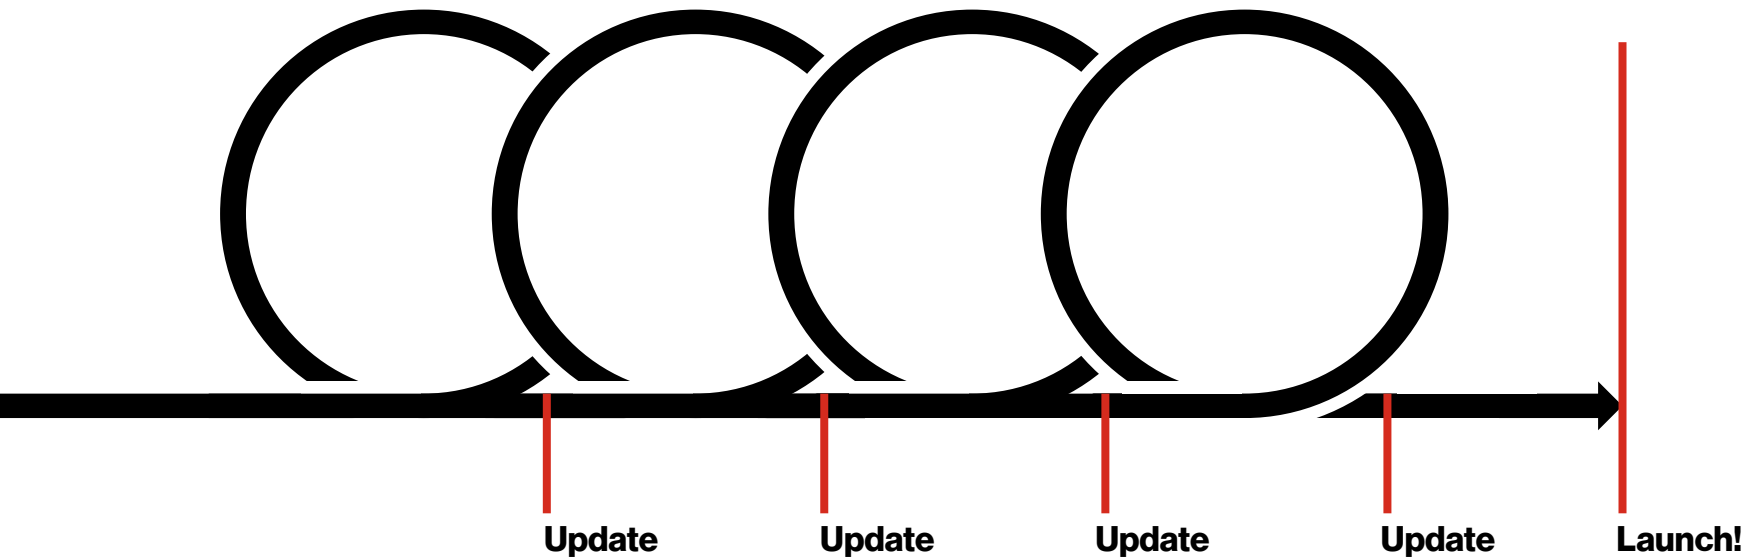

**Functional
requirements**

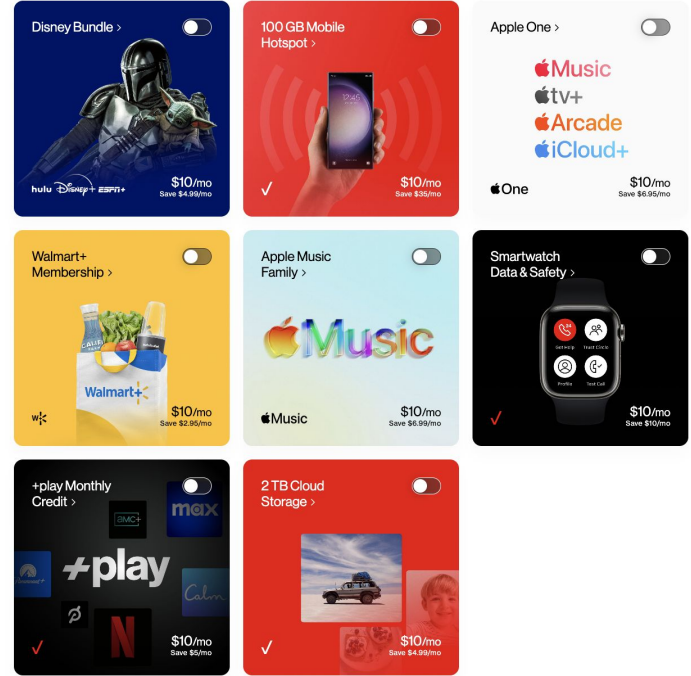

Design handoff

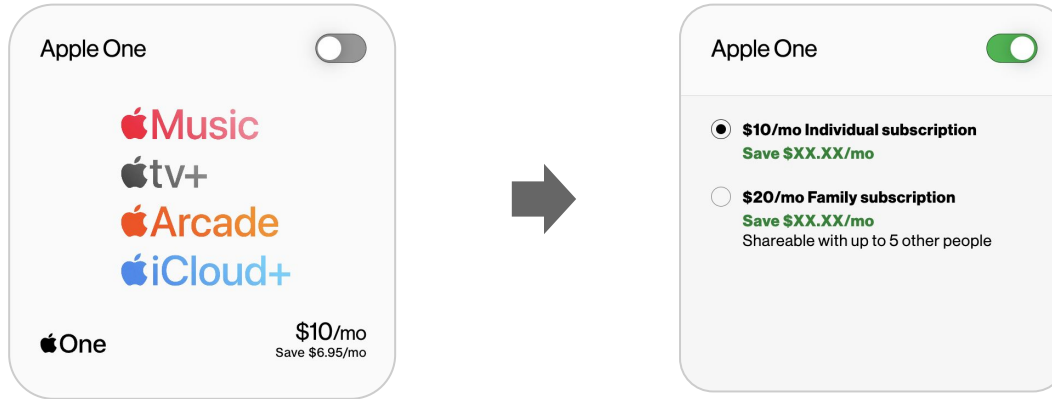

Requirements grow in detail and overall design is refined

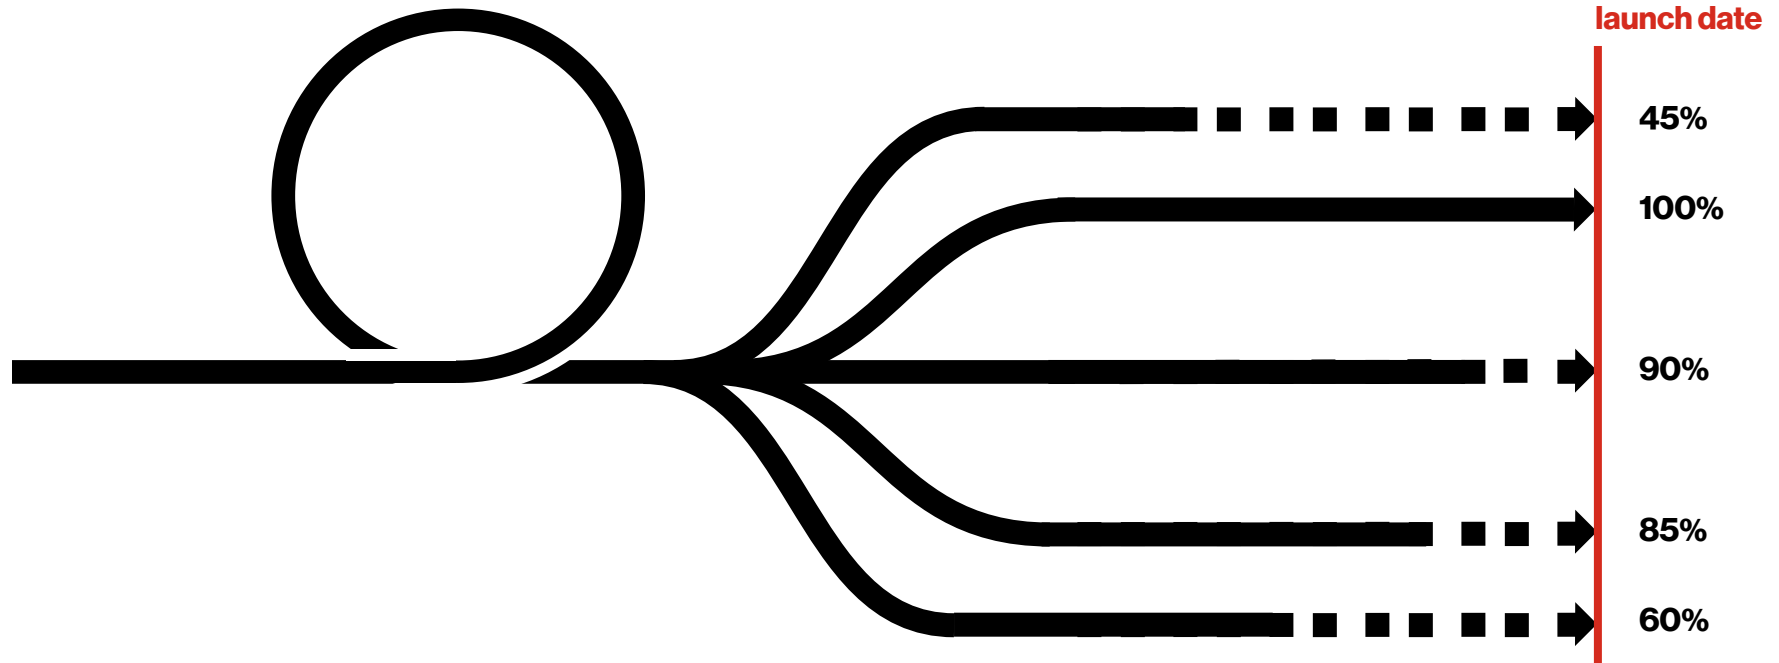

Requirements evolve

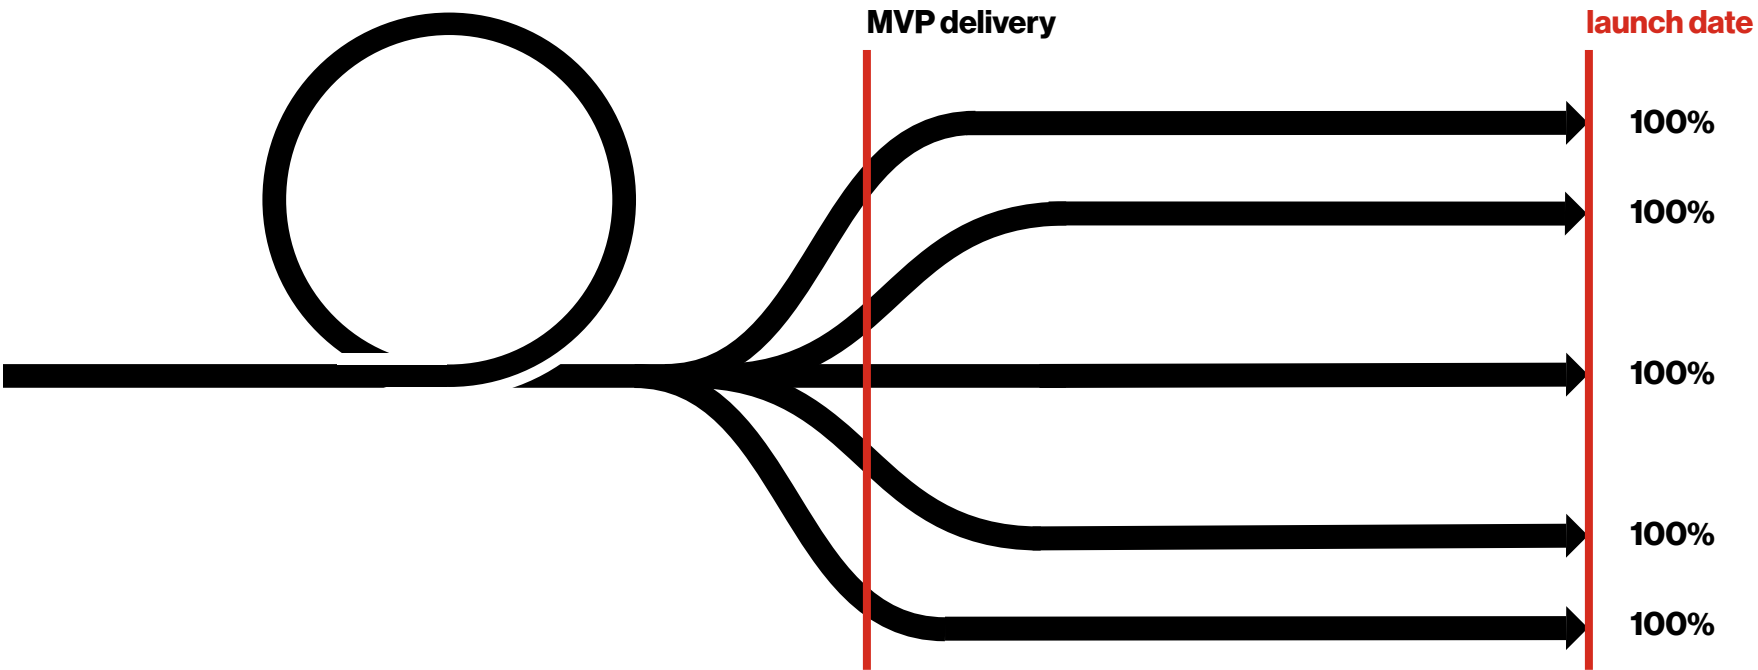

**The design actually makes it to
production as it was designed
with little error**

Varying degrees of delivery across journeys

Reduced scope to make code delivery

0

Production defects at launch!

Production defects at launch!

just kidding

**Fewer defects at launch
means designers can spend
more time designing!**

not kidding

Where do we go from here?

- ✓ How do we decide what transformational elements get scaled and which stay distinctively in myPlan?
- ✓ How can we systematically handle appropriate journey specific divergence without requiring manual participation?
- ✓ Do we continue to provide organisms and templates within the design system?

Thank you!
